Helply—A Micro-Job Marketplace for Daily Help

Abstract:

Helply is a web-based platform designed to connect individuals who require assistance with everyday chores—such as babysitting, tuition, cleaning, and electrical work—with people willing to offer these services. It acts as a bridge between job seekers and job providers, offering a simple and accessible solution for both parties.

The system supports two main user roles: **employers**, who can post specific job requirements, and **workers**, who can browse through available tasks based on their skills and preferences. Employers can select the service they need and view a list of available workers with their details and contact information. Workers, in turn, can view job listings, explore the job descriptions, and reach out to employers for opportunities.

Helply addresses a real-world need for flexible job connections and provides a reliable environment for users to find or offer essential services within their communities.

Technologies Used:

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Node.js, Express.js
- **Database:** MySQL
